

Abstract

The invention relates to directly compressible
5 tableting aids with a xylitol content of more than 90%
by weight and a content of at least one other polyol of
less than 10% by weight, which are produced by co-spray
drying or co-fluidized bed granulation. The invention
further relates to compositions, formulations and solid
10 forms or compacts which comprise a tableting aid
according to the invention, and to a process for
producing the tableting aids according to the
invention.
